

Together for more climate protection

Climate protection starts in the supply chain – Joining forces to achieve climate targets

Climate change is one of the defining challenges of our time. With our Net-Zero climate strategy, we are aligning with the United Nations' 1.5°C target and taking proactive steps toward a more climate-friendly future. We firmly believe that we can only limit climate change by working together, which is why we do not want to go down this path alone, but together with you.

Our support:

We would like to encourage you to actively work with us to reduce emissions. We know that topics such as developing climate targets and greenhouse gas accounting can seem complex – especially at the beginning. To provide you with the best possible support, we offer different services in our supplier initiative "Together for more climate protection":

Information materials

Training programs

Co-financing

From our module „Information materials“ we have compiled guidelines and digital training courses for you on the next page. These should support you in building up the necessary know-how and developing specific measures.

If you have any questions or are interested in an exchange, please contact us : sustainable-supply-chains@kaufland.com

Thank you for your commitment!
